LD Armateurs announces a new order for a ROV-DeepSea for the French Navy

Suresnes, 6 November 2026 – Following the successful operational trials of the ROV-DeepSea, developed for the French Navy, LD Armateurs signed a letter of intent with the French Defence Procurement Agency (DGA) on 3 November 2026, during the Euronaval exhibition, for the acquisition of a second remotely operated vehicle (ROV) capable of operating at depths of up to 6,000 metres.

Developed by LD TravOcean to address the strategic challenges of exploration, surveillance and intervention in the deep sea, the ROV-DeepSea recently demonstrated its capabilities during successful operational trials. This new milestone further confirms the confidence placed in LD Armateurs' expertise and the technological solutions developed by its teams.

"The success of these qualification trials confirms the robustness of the solution developed by our team, as well as our expertise in complex technologies dedicated to the protection of sovereign underwater infrastructure. We are proud to now be part of France's Defence Technological and Industrial Base," said Olivier Le Nagard, Managing Director of LD TravOcean.

About LD Armateurs

With more than 175 years of maritime expertise, LD ARMATEURS Group (LDA) designs and delivers tailored, high value-added industrial maritime solutions. The Group offers fully integrated services, spanning ship design, fleet management, and complex maritime operations, across four core business lines: Transport & Logistics, Submarine Telecommunications Cables, Offshore Wind and Subsea. LDA has a strong global presence, with 1,800 employees and a fleet of around 40 vessels. Since July 2025, the Group has been supported in its growth by InfraVia, through its InfraVia European Fund VI. For more information, visit: www.lda.fr
